Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kobayashi et al. (6402260) in view of Epple et al. (5295737).

Kobayashi et al. discloses a brake hydraulic controller having a pump (10A, 10B) to reflux fluid to a master cylinder (M), an electric motor (12) to drive the pump, and a control unit (16) for controlling an energization amount to the pump using a predetermined energization duty factor in accordance with the battery voltage. Kobayashi et al. does not teach that the energization duty factor is held at 100% for a predetermined time. Epple et al. discloses a brake hydraulic controller having a pump driven by an electric motor wherein the energization duty factor is held at 100% for 100 ms. (Column 2, Lines 52-54). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the system of Kobayashi et al. by using an energization duty factor of 100% for a predetermined time of 100 ms. as taught by Epple et al. for the purpose of generating the pressure required in the system.
